

## CD1174 – Sultani Wellfield Area

Well CD1174 “SULTANEH NO (S 66)” in the Sultani wellfield area is representative of a monitoring well near a pumping center where water levels have declined steadily as previously forecast. Clark (2002) found that the water level in well CD1174 was declining -1 to -2 m/yr during 1998-2001. The water level is currently declining -1 m/yr, which is also the long term trend using all data. By 2030, the saturated thickness at CD1174 is forecast to decrease to about 57 percent of the aquifer thickness. The Sultani wellfield provides municipal supply.
